INFRARED ACCESSORIES

Calibration Kit (P/N 32548-x)
The portable purge calibrator is a compact, accurate and safe system containing a non-explosive gas concentration. The lecture bottle is filled with a standard 50% LEL mixture of gas/air. Using a known gas/air mixture reduces the likelihood of error in field calibration. The hose and cup adapter (P/N 32554-1) that are included allow for quick calibrations and gas checks. Premixed calibration gases at approximately 50% LEL are available in lecture bottles.

Butane  C₄H₁₀
Ethane  C₃H₆
Hexane  C₆H₁₄
Methane  CH₄
Pentane  C₅H₁₂
Propane  C₃H₈

Spare bottles containing these gases may be ordered. Methane lecture bottles may be returned to General Monitors for refilling. Please consult your local General Monitors representative for further information.

Rain Guard (P/N 31545-1)
The IR Rain Guard is recommended for installation where the IR detector is directly exposed to the elements or where frequent drenching with water is practiced, such as offshore platforms.

Flow Block (P/N 31420-1)
The flow block assembly can be used to connect the IR400 to a gas sampling system.

Remote Gas Calibrator (P/N 32541-1)
The remote gas calibrator, RGC-IR, is designed to be permanently installed on an IR gas detector. The RGC-IR provides protection from outside elements and allows the user to apply calibration gas (@ 50 psi) to the detector from a remote source. See RGC-IR manual for specifications.

Splash Guard (P/N 32545-1)
The IR Splash Guard protects the sensor cavity from water spray, wind, and dust.
Zero Switch Junction Box (P/N 31305 – CSA, P/N 31421 ATEX)
The junction box used with the IR400 is fitted with or without a zero switch for baseline zeroing or calibration. P/N 31305-1 is pictured below with zero switch.

Duct Mount Junction Box
(P/N 31306-1 – US manufactured, P/N 31424-1 – Ireland manufactured)
The Duct Mount Junction Box is used to mount IR detectors in HVAC systems, turbine intakes, and other air handling applications (p/n 31306-1 pictured).
